

## Find Total and Free Disk Space from Command Line Windows XP - 7 - 2003 - 2008

Submitted by ingram on Wed, 12/05/2012 - 6:30pm

Free Disk Space Command

To find the total and free disk space in all modern versions of Microsoft Windows from the command line, you need to use the [fsutil](#) [1] command. Here is an example:

***fsutil volume diskfree c:***

**Total # of free bytes : 11658346496**

**Total # of bytes : 209712050176**

**Total # of avail free bytes : 11658346496**

Unfortunately, there is no way to change the output from bytes to megabytes or gigabytes. If you want to learn how to find total and free disk space in Linux, [check out this tutorial](#) [2].
