

How to Disable or Turn Off Appport Error Reporting in Ubuntu 12.04 and 12.10

Submitted by Victoria on Sun, 01/13/2013 - 12:33am

Ubuntu Logo

To disable or turn off Appport error reporting in Ubuntu, simply edit "/etc/default/appport" and change "enabled=1" to "enabled=0". You must edit this file as root. Reboot and appport will not pop up all the time now:

gksudo gedit /etc/default/appport

```
apport (/etc/default) - gedit
File Edit View Search Tools Documents Help
Open Save Undo
apport x
# set this to 0 to disable appport, or to 1 to enable it
# you can temporarily override this with
# sudo service appport start force_start=1
enabled=0
Plain Text Tab Width: 8
```
