How to Find What Version of Drupal is Running

If you are navigating through the help pages and admin section looking for the version number, you may not be able to find it. The easiest way to find what version of Drupal is running is by viewing the CHANGELOG.txt file. You can find it here:

*<http://your-domain/CHANGELOG.txt>*

Make sure you use the correct capitalization. You will see the current Drupal version at the top.
